

Diana Feygelson, Flare: Stone Candle Set
Studio 2: Discover, Spring 2018

An obsidian candle set that enables a distinctive interaction with flame.

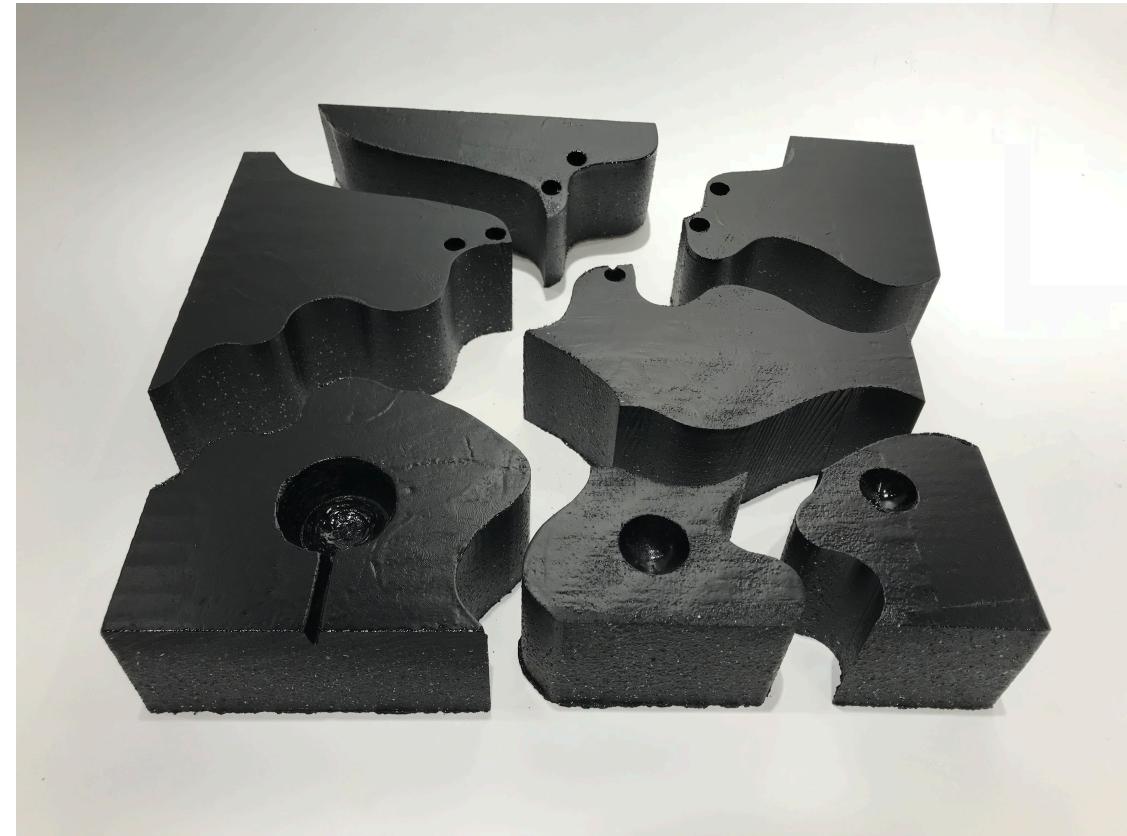

Flare: Stone Candle Set

Flame necessitates ritual. A similar series of steps is followed each time someone chooses to strike a match or flick a lighter. Candles are usually set aside after lighting, and observed or admired from a distance. This collection alters and extends the familiar ritual, allowing users to manipulate and interact with candle flames after they are lit.

The Flare collection is made from obsidian. The top of each piece within the collection is highly polished, reflecting the flames lit above. The sides are unpolished, leaving the unique rough texture of each stone visible.

The collection comes with a set of matches that can be struck against the unpolished side of any piece. Additionally, the collection comes with a box of candles. Each candle can be enjoyed for approximately two hours.

Candle Holders

Instructions for Candle Holder Pieces

Place a candle in each of the seven indentations in the stones.

Arrange pieces so that curves align and candles are clustered together.

Strike included match against candle holder, or other stone piece.

Light any single candle (and fire will travel to light the others.)

Slide candles to separate and rearrange according to preference.

Examples of Candle Arrangements

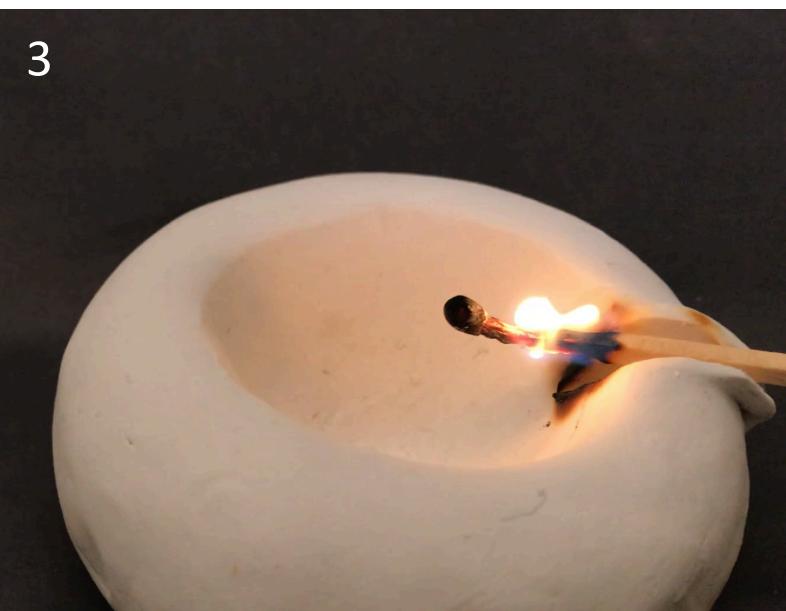

Match Tray

Instructions for Match Tray

Instead of blowing on matches or shaking them, place lit match on the lip of the stone tray—with the lit end of the match towards the center of the tray.

Watch a small fire blaze up and burn briefly, before it flickers and vanishes.

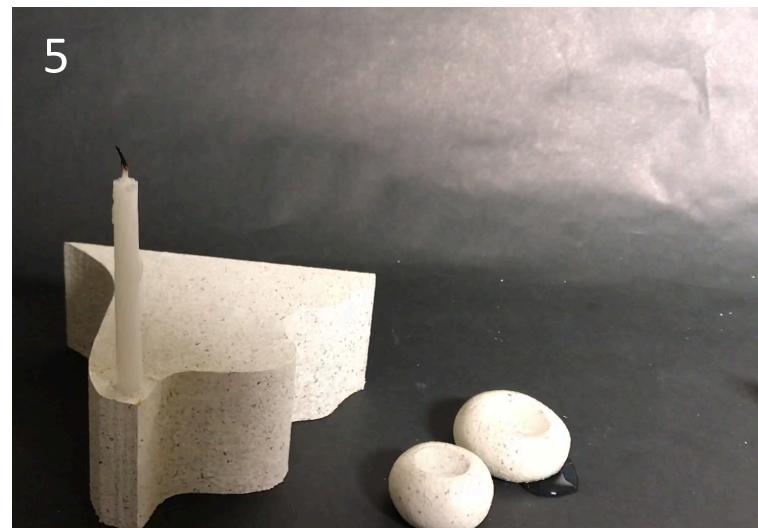

Water Set

Instructions for Water Set

Slowly fill the two small indentations with water. The water will bead up, resembling dew.

When you are ready to extinguish the candles, touch the water with your thumb and forefinger before pinching out the flame.
